

The Zimmer Cryo6 is a user-friendly skin cooling system specifically designed to treat and minimize specific areas of pain and inflammation through the direct application of temperatures colder than ice or ice packs. It is also intended for temporary anesthetic relief from injections. Through CryoUSA Active Recovery Centers, athletes and active people alike have discovered the benefits of “spot cryotherapy” for inflamed or swollen muscles and joints as a result of injury or overuse.

BENEFITS

- Designed to match the increasing demands of multiple industries including rehabilitation, recovery and more
- Distinctively quieter while offering a vast variety of applications
- Integrated system with 9 fans ensures maximum comfort for the patient due to extensive options for airflow
- Programmable for setting “favorites” speeds and cooling levels
