

CryoNiQ Cryochamber

Whole Body Cryotherapy

The CryoNiQ Cryochamber is a single-person chamber used for individual sessions of Whole Body Cryotherapy. During a session, clients wear minimal protective clothing (gloves, socks, and briefs). The temperature is regulated by the automated system but can also be adjusted within a range of -166°F to -320°F by the operating technician via keypad or optional touchscreen control panel.

The unit is equipped with an electric lift used to adjust a client's height in the chamber so that the body is submerged in the hyper-cooled air up to the neck while the head remains above. This enables the client to be in continuous communication with the technician, which improves the client's overall comfort.

For added safety, the CryoNiQ Cryochamber comes standard with a pair of non-locking pivoting doors; one or both can be opened at any time. The unit also features a heated ventilating system to minimize moisture residues and to vent out used nitrogen gasiform air. The geometric design of the inner cabin optimizes convection of cryotherapy temperatures for improved session results.

- Temperature Range: -166°F to -320°F
- Continuous Flow Technology for stable temperature throughout the session
- Electric lift with push button control
- Unique dual-door design for easier entering and exiting
- Customizable with multiple exterior and interior color options (Icy White shown)
- Session time: 2-3 min
- Nitrogen usage during session: avg of 6 liters per session
- E-Tablet Control Panel and viewing screen
- Automatic standby 4 cooling

Product Specifications

CryoNiQ Cryochamber

TECHNICAL DATA

- Cryogenic gas: Liquid Nitrogen
- A/C Power: 220V, single-phase electricity
- Width (doors open): 84 in.
- Width (doors closed): 37 in.
- Length: 59 in.
- Height: 95 in.
- Diameter of chamber: 37 in.
- Dimension of the hydrogen tank: 28"L x 29"W x 55"H

WARRANTY

All CryoNiQ Cryochambers come with a 2-year limited warranty on all parts and labor.
