

The Kriopol Spot Cryotherapy System is a user-friendly, skin cooling device utilizing liquid nitrogen to generate air temperatures of -256°F within 30-seconds of activation. When the temperatures are applied to the surface of the skin anti-inflammatory responses in the body are activated. The soft, cold air of the Kriopol can also be applied to the face for a “facial-cryo” effect.

BENEFITS

- Designed to match the increasing demands of multiple industries including rehabilitation, recovery and more
- Distinctively quieter while offering a vast variety of applications
